

Preparing for Anthropic IPO

UNCOVER WHAT'S NEXT

Plan With Confidence. Live With Clarity.

Planning for a liquidity event is not one decision, it's a coordinated strategy.

For many Anthropic shareholders, equity represents years of focus, risk, and belief in something exceptional. An IPO doesn't change that belief, but it does change the complexity surrounding it. As liquidity approaches, the conversation naturally shifts from *building* to *protecting, planning, and optimizing*.

Liquidity introduces new questions all at once: timing, taxes, concentration risk, income planning, estate structure, and emotional pressure. The challenge is not simply "what to do," but how to think about decisions that are interconnected and irreversible once executed.

BakerAvenue works with Anthropic shareholders to help them simplify the complex with clarity, coordination, and intention.

Holistic Concentrated Stock Management

Striving to Optimize Concentrated Wealth

BakerAvenue employs a multi-disciplinary approach that strives to optimize the value of concentrated stock positions. We encompass solutions for strategic diversification, hedging, income generation, and tax minimization. Through a synthesis of Technical, Macro, and Fundamental disciplines, we guide clients through the complexity of unwinding a concentrated stock position while simultaneously working towards enhancing its potential value.

Holistic Concentrated Stock Approach & Tax-Advantaged Strategies

We use fundamental valuation and technical analysis to advise clients on action items: diversification, holding, and exercising employee stock options. By doing so, we can generate potential income and hedge potential downside risk when fundamentals and technicals are negative.

Get insights into executive compensation strategies designed to diversify and reduce tax exposure. We offer deep expertise in disposing of highly appreciated assets, Incentive Stock Options (ISOs/AMT) and Alternative Investments. For more information, visit bakerave.com/cs.

“

We take pride in our belief that a thorough understanding of individual stock positions is an important part of the investment process. This includes evaluating both valuation metrics and technical factors. We believe these insights can provide perspective beyond diversification alone.

Why IPOs Feel Simple – *But Rarely Are*

Public listings often create the illusion of opportunity while quietly introducing new constraints.

Based on historical IPO patterns, markets tend to anticipate events well before they occur, and structural milestones, such as **lockup expirations**, can materially impact stock behavior and decision timing.

For shareholders, the real complexity often comes from the overlap of:

- Highly concentrated exposure
- Low basis positions and significant tax friction
- Market volatility surrounding lockups and earnings
- Pressure to “do something” without a coordinated plan

A Coordinated Framework for Concentrated Equity

BakerAvenue approaches concentrated stock planning as an **integrated system**. Our work is structured around four interdependent objectives that we believe are most effective when considered together.

1

Managing Risk
Without Forcing
Premature
Decisions

Concentration introduces volatility and uncertainty. However, selling is not the only lever. Risk can be evaluated, monitored, and addressed dynamically as circumstances evolve.

2

Creating Tax
Flexibility Before
Liquidity

Tax decisions are often most powerful *before* liquidity occurs. Advance coordination allows clients to explore planning structures and tax-aware positioning while time and flexibility still exist.

3

Aligning Liquidity
With Real-World
Goals

Liquidity should support lifestyle, long-term growth, and legacy. Not all capital should take the same level of risk, and defining that upfront makes every later decision clearer.

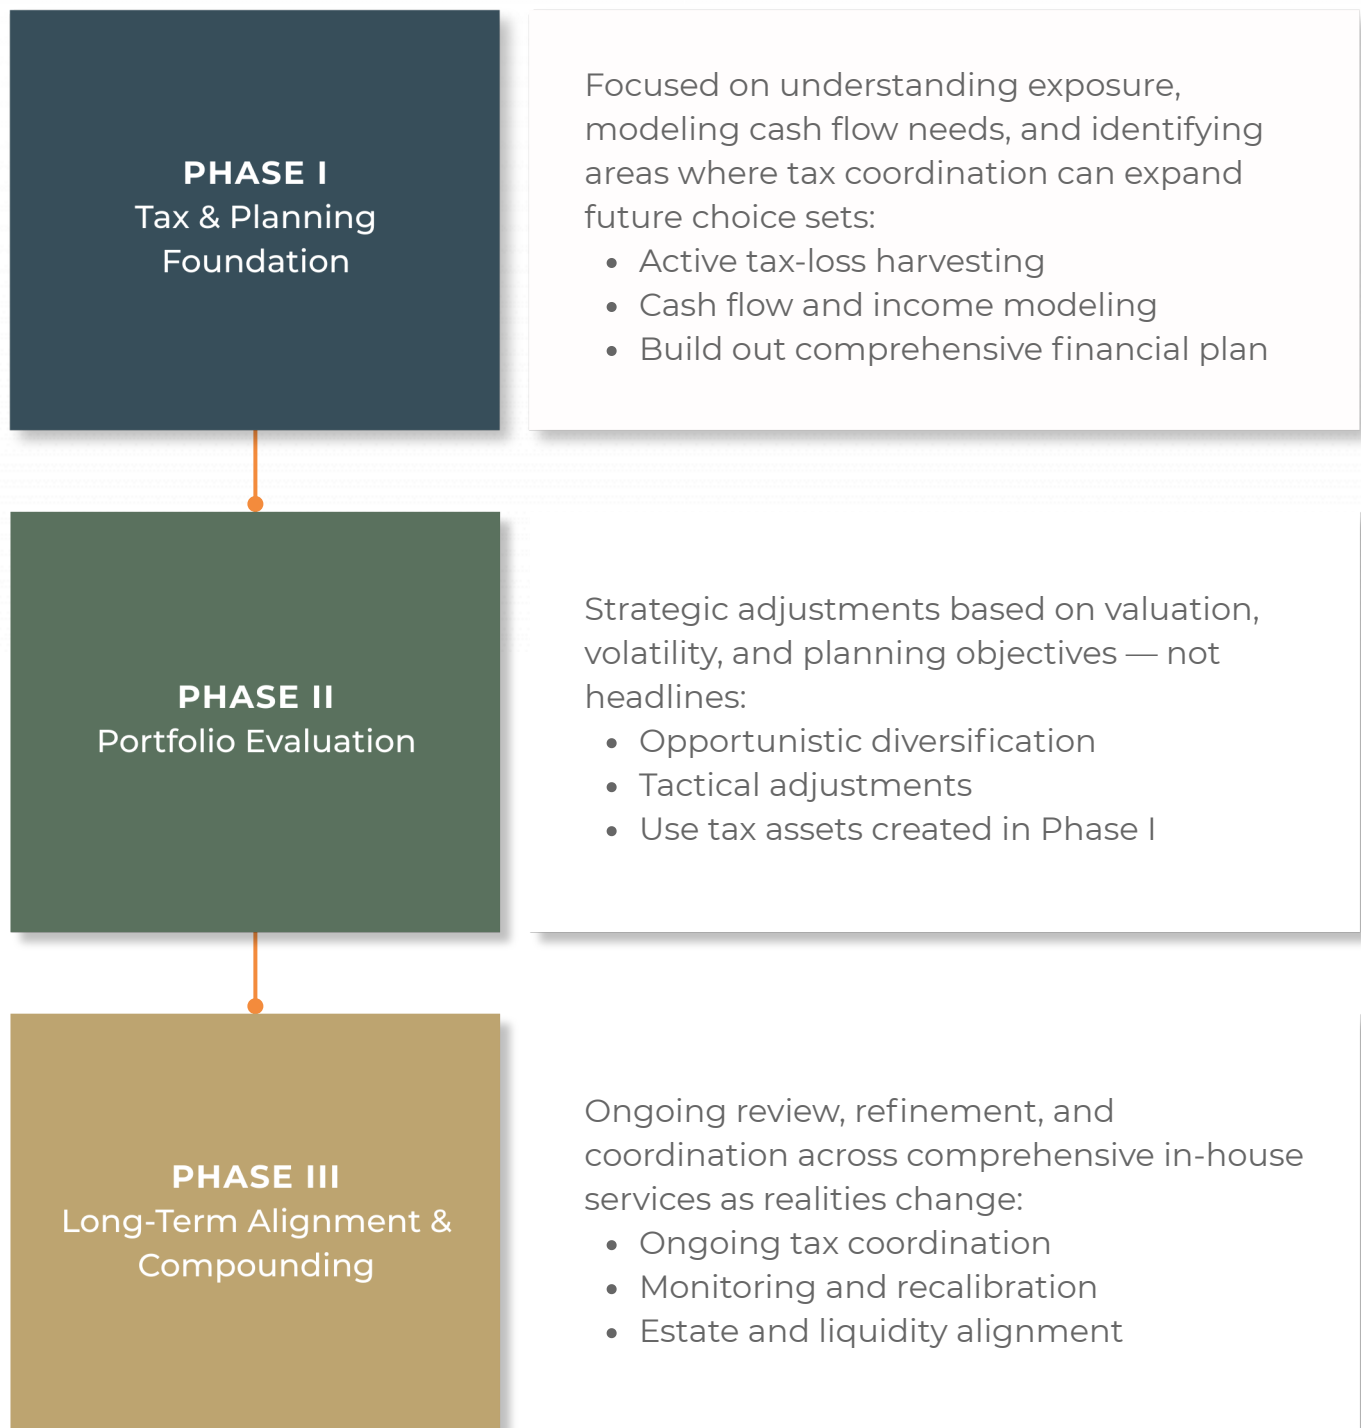

4

Reducing
Complexity and
Emotional Pressure

Periods of rapid change generate stress, second-guessing, and fear of missing out. An objective framework helps replace reaction with deliberation.

How BakerAvenue Works Through Complexity

Our process is intentionally phased, designed to evolve alongside market conditions, personal priorities, and regulatory realities rather than rely on a single moment or outcome.

Why Early Conversations Matter

Many of the most impactful planning opportunities are time-sensitive — not because markets demand urgency, but because **pre-liquidity decisions** preserve flexibility that disappears post-event.

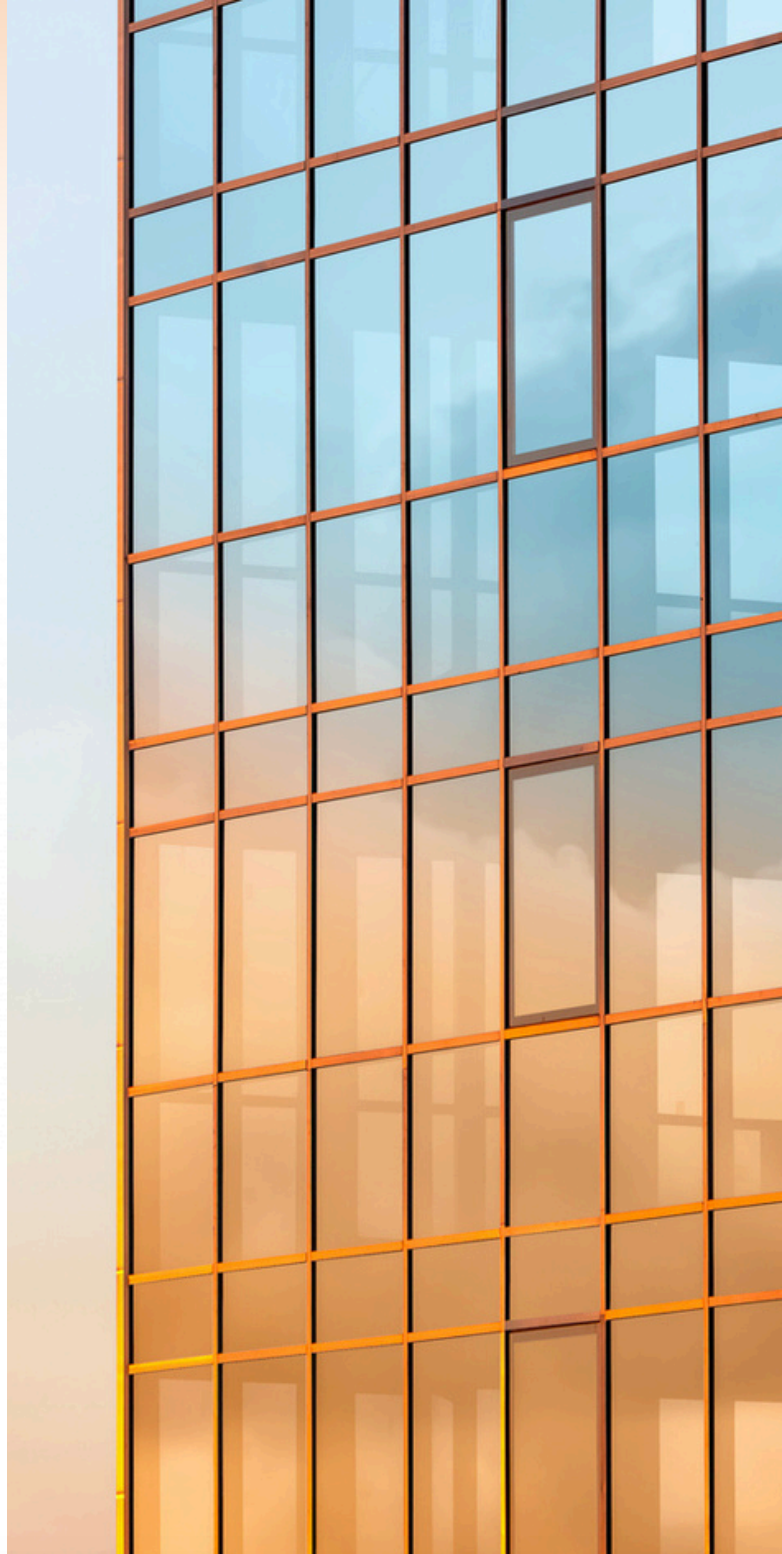

Starting the conversation early allows Anthropic shareholders to:

- Understand risks that are often invisible in concentrated positions
- Explore scenarios privately and without pressure
- Enter liquidity events with clarity rather than urgency

For most clients, that peace of mind alone is meaningful.
